Description

The QuantalRF QWX27205 is a highly integrated dual front-end IC designed for high performance Wireless Local Area Network (WLAN) applications supporting all standards up to Wi-Fi 7. It features a patent pending PA architecture providing superior linearity, a low loss single-pole, double-throw (SPDT) switch and an LNA.

The QWX27205 is equipped with on-chip filters enhancing coexistence performance. IoT devices are supported via the ultra-low power mode.

All RF ports are matched on-chip to 50 ohms. Combined with the on-chip filtering, it minimizes the external components and application layout area.

The QWX27205 is fabricated as a single die in CMOS SOI technology.
